

EX 02

Les spectres IR

EX1

- Déterminer les groupes fonctionnels présents dans les molécules ci-contre

EX2

Un laborantin maladroit a mélangé les 3 étiquettes de 3 produits. Il effectue une analyse IR et il doit remettre les étiquettes en place.

S1 : hexanal (aldéhyde) ; S2 : éthanoate d'hexyle (ester) ; S3 : hexan-1-ol (alcool)

1) Déterminer les groupes fonctionnels présents dans les molécules ci-contre, puis retrouver les formules semi-développées correspondant aux molécules analysées par le laborantin

2) Retrouver le spectre IR des 3 molécules parmi ceux présentés ci-dessous

EX3

- Donner la formule topologique des molécules
- Entourer et nommer le groupe fonctionnel présent dans chacune des molécules
- Identifier la molécule dont on donne le spectre IR ci-dessous

EX4

- Associer à chaque spectre IR sa molécule

EX5

- Associer à chaque molécule son spectre IR

EX6

- Associer à chaque molécule son spectre IR

EX7

- Associer à chaque molécule son spectre IR
